

PRESS RELEASE

PPM Ltd. Enhance *ViaLite*® L-Band Product Line

Superior Performance makes RF over Fiber Products a cost effective Alternative to Coaxial Cable in Teleport Installations

PLAINSBORO, NJ, February 14, 2008 – A.G. Franz Associates, LLC announces enhancements to the *ViaLite*® range of RF over Fiber products from PPM Ltd.

Modifications to the design of the L-band modules in the *ViaLite*® product family have increased performance by giving improved dynamic range, tightened tolerances and low noise with no increase in cost to the customer.

When compared to competitors the *ViaLite*® Satcom L-band link products deliver:

- Superior Linear Performance
- Ultra Low Noise
- High Spurious Free Dynamic Range.

ViaLite® links offer more than an alternative to coaxial cabling in teleport earth stations. “They have been designed to provide very high carrier-to-noise ratio and extremely linear performance, this means a cost effective, technically superior installation to the SatCom user“ explains Dr. Martin Ryan, Director of Sales and Marketing for PPM.

The *ViaLite*® systems have been engineered to give industry-leading performance when compared with any other fiber optic link. Only *ViaLite*® links have the ultra wide dynamic range so that auto gain control is not required to cope with changing signal intensity caused by meteorological conditions.

Even more conveniently, the enhanced range is ready for shipment immediately in the US from PPM’s Master Distributor A.G. Franz Associates, LLC.

About PPM Ltd.:

PPM is a privately held company based in Swindon, United Kingdom, and provides a complete portfolio of RF-over-fiber products used across a wide range of applications in the communications sector. PPM products are used in the transmission of analog, RF and digital data signals over optical fiber in diverse applications including: telephone, satellite ground stations, public safety mobile radio networks, cellular antenna remoting, GPS timing and TV signal distribution.
